

My Final Report

By: Yara Iskandarani

Game : Trivia

1. Project details:

So my final capstone project is " SO YOU THINK YOU CAN TRIVIA (animal edition) ? so this game is basically just taking turns to answer questions on animals and the person with the most points at the end wins

2.explain the code :

So basically my code starts out welcoming the player and just talking about the rules and the host and, which is me. So first of all, you need to enter your name, then I have a variable, which is equal to zero, which will keep track of the points. Then I asked the first question, and then I use an if statement to say, if the answer is equal to the specific answer, then, to print correct, and then to add on 100 points to the variable and that we use to keep track of the points. Else, print. Sorry, wrong. And I did that with the rest of with the rest of the five questions until we get to the end where I print Congrats, and I print the final score. And then, let me print it, you need to answer the question if you get it wrong, it shows up as wrong and then you forget it right it shows up as right. It's pretty simple but it's an extremely fun game.
